# Open Source Working Group

- The Open Source Working Group priorities for the projects is outlined in this [presentation deck](#)

In progress:

- The Working Group agreed to focus initially on the oneDNN and oneDAL projects
- Discussing how the projects should adopt best practices and build infrastructure
- Fujitsu are contributing Arm target support to oneDAL
  - This is helping to highlight areas the project can adapt to improve the contribution process

# Specification Working Group

- The Specification working group is working to increase participation from the broader community

In progress:

- The repository for the oneAPI specification will migrate to GitHub pages away from the current Intel managed system
- Plans for ensuring there are clear paths for the community to contribute

# Special Interest Groups

- A public calendar of meetings is available. (Linked from [the foundation repo](#))
- Math SIG held in January
- Language and Hardware SIGs will happen in February

# Upcoming

- Part time Program Manager (Linux Foundation staff) for the Foundation joining in March
- Approved events and marketing plan for 2024
- Ordering marketing materials for events
- Community webinar
- Khronos liaison agreement signature and announcement
- Member outreach to public cloud infrastructure providers regarding build infrastructure
